About

I am a first-year Computer Science student at KL University with a passion for building things that live on the internet. I am currently in a deep learning phase, exploring how software can solve everyday problems. My coursework has given me a strong foundation in Java, but I am most excited about web development. I recentl....

About

I'm a first-year Computer Science Engineering student with an interest in technology, programming, and exploring new ideas. I'm currently building my skills in coding and learning how technology can be used to solve real-world problems.

I've worked on a research project exploring the use of AI for road damage detection and developed a fitness tracker application using Java. These experiences have helped me gain a better understanding of programming and how technical knowledge can be applied in practical ways.

Apart from academics, I've also taken on the role of a Photography Coordinator, which has helped me develop my teamwork, coordination, and communication skills.

I'm always open to learning new things, exploring different areas of technology, and connecting with people who share similar interests. I'm excited to keep learning, gain experience, and grow both personally and professionally as I continue my journey in computer science.

About

I'm a first-year B.Tech student at KLH University, currently exploring the world of technology, programming, and problem-solving. I'm at the beginning of my journey, and I see that as an opportunity to question, experiment, make mistakes, and discover what I'm capable of. I'm interested in understanding not just how things work, but why they work and how they can be made better. For me, growth comes from stepping outside my comfort zone, learning through experience, and being open to perspectives different from my own. I'm looking forward to turning what I learn in the classroom into ideas and projects that have real-world relevance. Still learning, still exploring, and always looking for the next thing that challenges me to think differently.
